DETAILED ACTION

Reasons for Allowance

1. The following is an examiners statement of reasons for allowance: In response to the double patenting rejection of the office action dated March 31, 2008, further in view of applicant's amendments filed June 24, 2008, the application has been carefully reviewed and respectfully considered.

In response to the previous Office action applicant has filed a terminal disclaimer as indicted in a response files 06/24/08, and also applicant has amended claim 29-32, in response to a35 USC 101 rejection. Therefore, based on currently amended subject matter, and the remarks discussed in page 12, the remarks has been considered and found persuasive. Accordingly, the rejection has been withdrawn and claims 1 through 32 are allowed for the reasons as set forth below:

Regarding claims 1-28, claims area allowed for the reason the prior art searched and of record neither anticipates nor suggests a data processing device that is connected to and in communication with a terminal device, comprising: a communication unit connected to the terminal device through an external network; a memory unit comprising an image data storage area that stores therein image data; a recognition setting unit that enables the terminal device to recognize the image data storage area in the memory unit as an external storage device so as to enable the terminal device to be accessible to the image data storage area; a data acquiring unit

Art Unit: 2625

that acquires image data received by way of the communication unit from the external network; a converting unit that converts the acquired image data acquired by the data acquiring unit through the communication unit into converted image data whose format is compatible with the terminal device; and a writing unit that writes the converted image data converted by the converting unit into the image data storage area.

Further, regarding claims 29 and 30 the prior art searched and of record neither anticipates nor suggests a recognition setting unit that enables the terminal device to recognize the image data storage area in the memory unit as an external storage device so as to enable the terminal device to be accessible to the image data storage area; a data acquiring unit that acquires image data received by way of the communication unit from the external network; a converting unit that converts the acquired image data acquired by the data acquiring unit through the communication unit into converted image data whose format is compatible with the terminal device; and a writing unit that writes the converted image data converted by the converting unit into the image data storage area.

As to claim 31, the prior art searched and of record neither anticipates nor suggests a computer readable storage medium that stores a computer executable program that causes a facsimile machine to function as a data processing device, the facsimile machine including a communication unit connected to a terminal device through an external network, and a memory unit comprising an image data storage area that stores therein image data, the program comprising: instruction for enabling the terminal device to recognize the image data storage area in the memory unit as an

Art Unit: 2625

external storage device so as to enable the terminal device to be accessible to the image data storage area; instruction for acquiring image data received by way of the communication unit from the external network; instruction for converting the acquired image data through the communication unit into converted image data whose format is compatible with the terminal device; instruction for writing the converted image data converted by the converting unit into the image data storage area.

As to claim 32, the prior art searched and of record neither anticipates nor suggests a storage medium that stores a program for permitting a personal computer to function as a data managing device for use in combination with the data processing device, a program of making a judgment as to whether or not the image data has been stored in the external storage device in the data processing device; a program of duplicating the image data stored in the external storage device into the nonvolatile storage medium if the image data has been stored in the external storage device; and a program of deleting the image data having been stored in the external storage device from the external storage device after duplicating the image data into the nonvolatile storage medium.
